

1.Problem Statement:

Configure the Selenium web driver.

Configure the Internet Explorer browser and chrome browser. Before configuring capture the exception displayed.

2.Source code:

To load Chrome driver (LoadDriver .java)

```
package com.ibm.seleniumconcepts;

import org.openqa.selenium.WebDriver;
import org.openqa.selenium.chrome.ChromeDriver;

public class LoadDriver {

    // Declaration of main method
    public static void main(String[] args) {

        // Setting the absolute path to load Chrome Driver
        System.setProperty("webdriver.chrome.driver",
"./drivers/chromedriver.exe");
        // Creating object for Chrome Driver
        WebDriver driver = new ChromeDriver();

    }

} // End of Program
```

To load IE driver (LoadIeDriver.java)

```
package com.ibm.seleniumconcepts;

import org.openqa.selenium.WebDriver;
import org.openqa.selenium.ie.InternetExplorerDriver;

public class LoadIeDriver {
    // Declaration of main method
    public static void main(String[] args) {

        // Setting the absolute path to load IE Driver
        System.setProperty("webdriver.ie.driver",
"./drivers/IEDriverServer.exe");

        // Creating object for IE Driver
        WebDriver driver = new InternetExplorerDriver();

        System.out.println("Hello");
    }

} // End of program
```

3.Output:

The screenshot shows the Selenium Documentation page in a web browser. The browser's address bar shows 'Selenium Documentation' and 'Downloads'. The page has a yellow header with a banner for 'Early Bird' tickets for SeleniumConf Tokyo. Below the banner, there are several logos and links for third-party tools and plugins. The main content area is titled 'Third Party Drivers, Bindings, and Plugins' and contains information about Selenium IDE, Selenium WebDriver, and Selenium Grid. It also includes a table of browser drivers and their status.

QUALITY IS A CULTURE

WebDriverBackedSelenium

- [Support](#)
- [RC](#) (Final version 3.1.0 Released 2017-02-16)

SafariDriver - DEPRECATED - use Apple's SafariDriver with Safari 10+

SafariDriver now requires manual installation of the extension prior to automation

- Latest release [2.48.0](#)
- [Wiki Page](#)

Selenium IDE

Selenium IDE is a Chrome and Firefox plugin which records and plays back user interactions with the browser. Use this to either create simple scripts or assist in exploratory testing.

Download latest released version [for Chrome](#) or [for Firefox](#) or view the [Release Notes](#).

Download [previous IDE versions here](#).

Third Party Drivers, Bindings, and Plugins

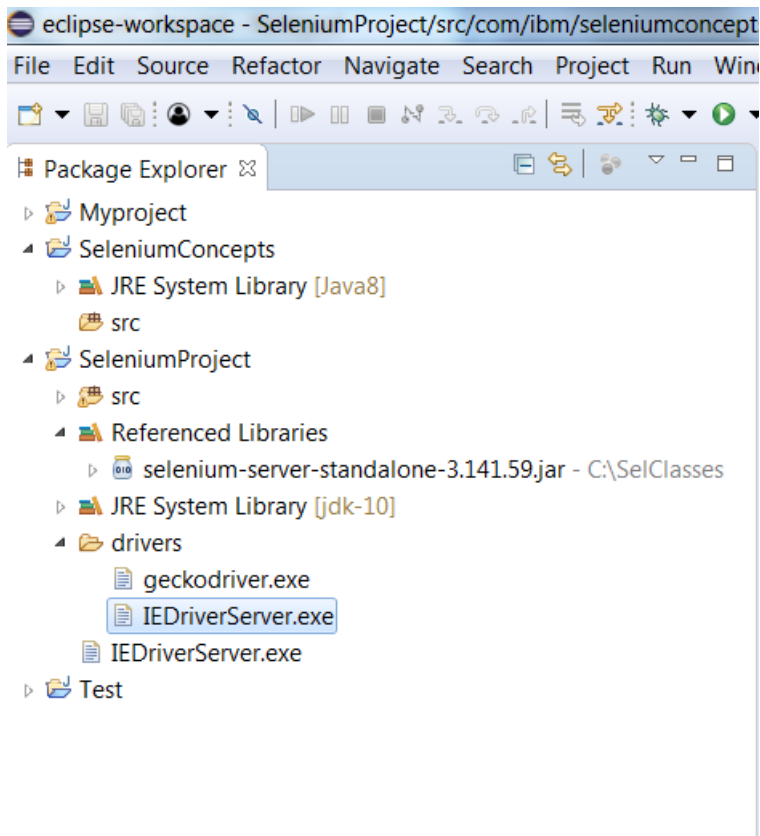

Selenium can be extended through the use of plugins. Here are a number of plugins created and maintained by third parties. For more information on how to create your own plugin or have it listed, consult the docs.

Please note that these plugins are not supported, maintained, hosted, or endorsed by the Selenium project. In addition, be advised that the plugins listed below are not necessarily licensed under the Apache License v2.0. Some of the plugins are available under another free and open source software license; others are only available under a proprietary license. Any questions about plugins and their license of distribution need to be raised with their respective developer(s).

Third Party Browser Drivers NOT DEVELOPED by seleniumhq

Browser

	change log	issue tracker	implementation
Mozilla GeckoDriver	latest	change log	Status
Google Chrome Driver	latest	change log	issue tracker
			selenium wiki page

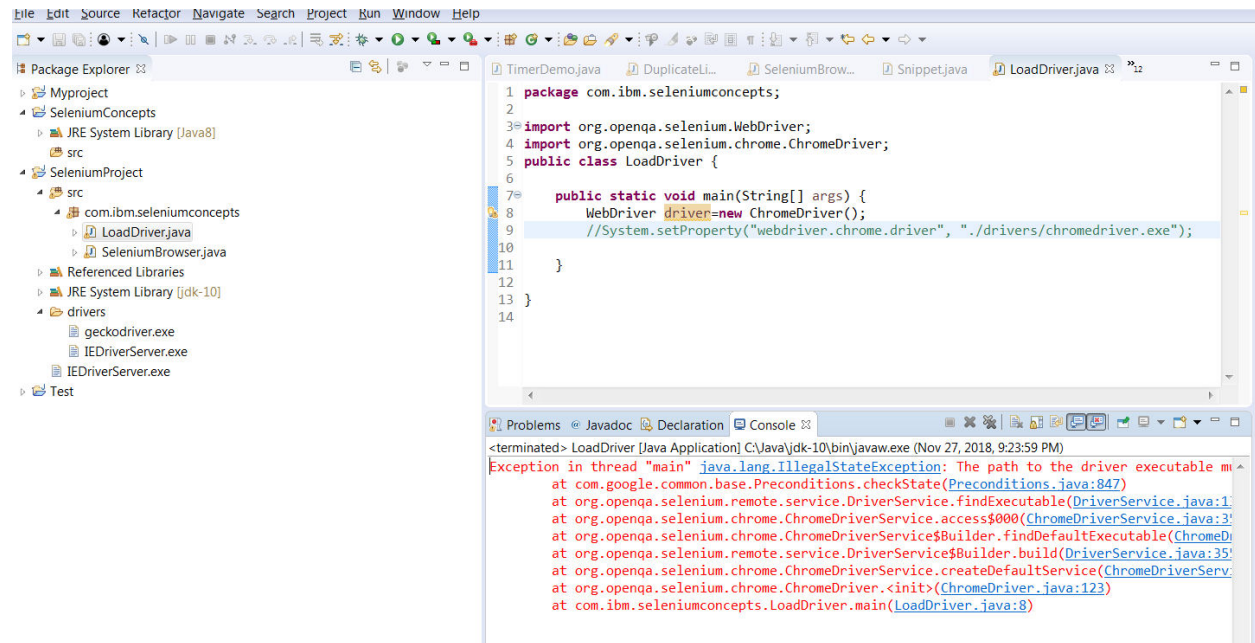

The screenshot shows the Eclipse IDE Package Explorer. The project 'SeleniumProject' is selected, and the 'src' folder is expanded. The 'Referenced Libraries' section shows the following dependencies:

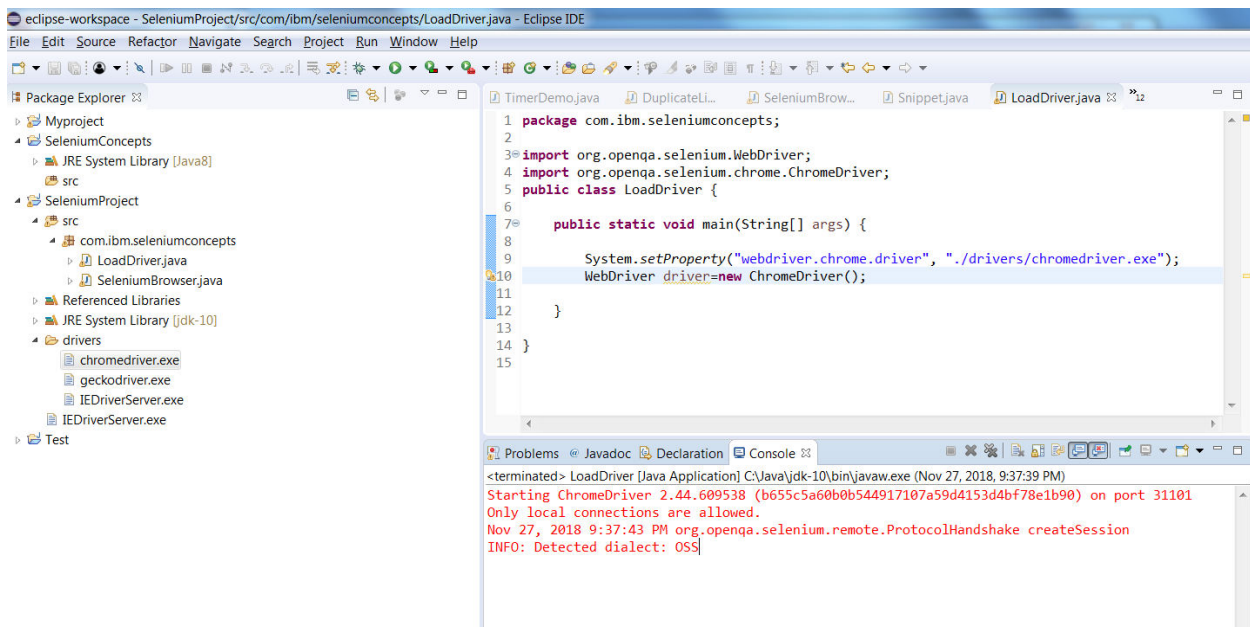

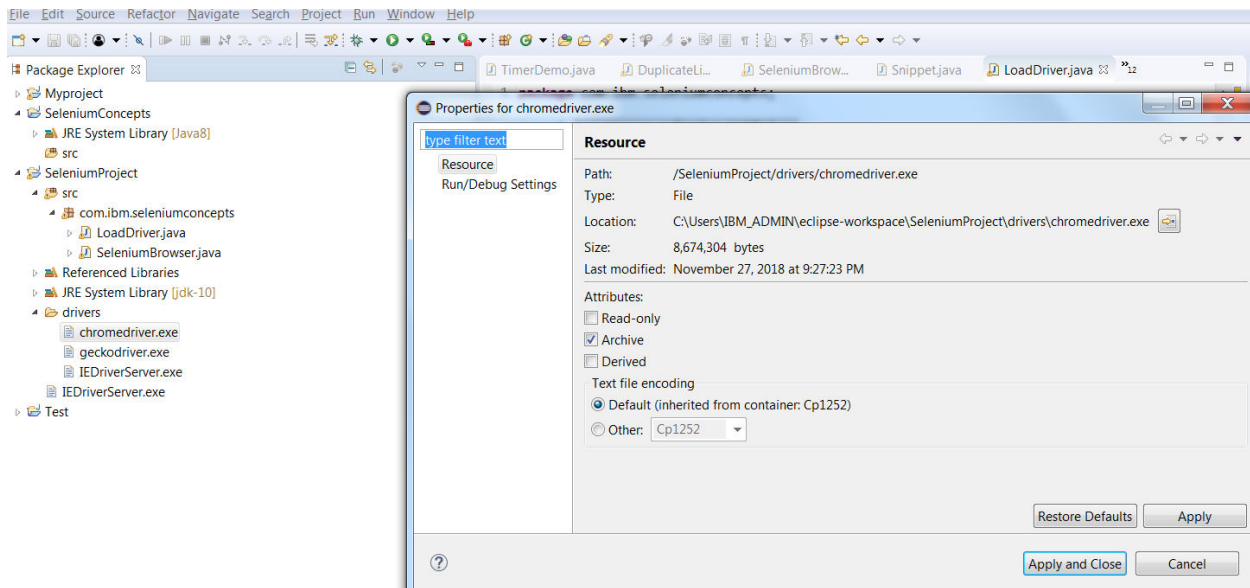

- selenium-server-standalone-3.141.59.jar - C:\SelClasses
- JRE System Library [jdk-10]
- drivers
 - geckodriver.exe
 - IEDriverServer.exe

The 'Test' folder is also visible in the Package Explorer.

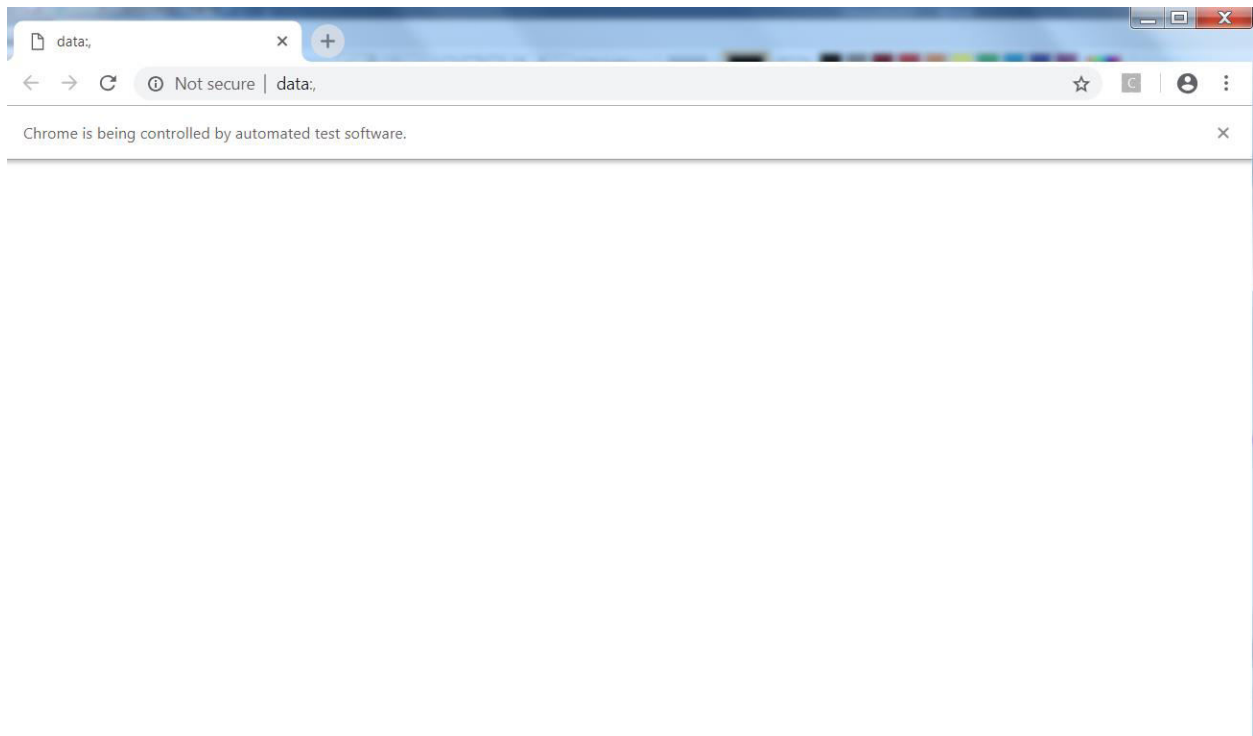

Exception for Chrome Driver:

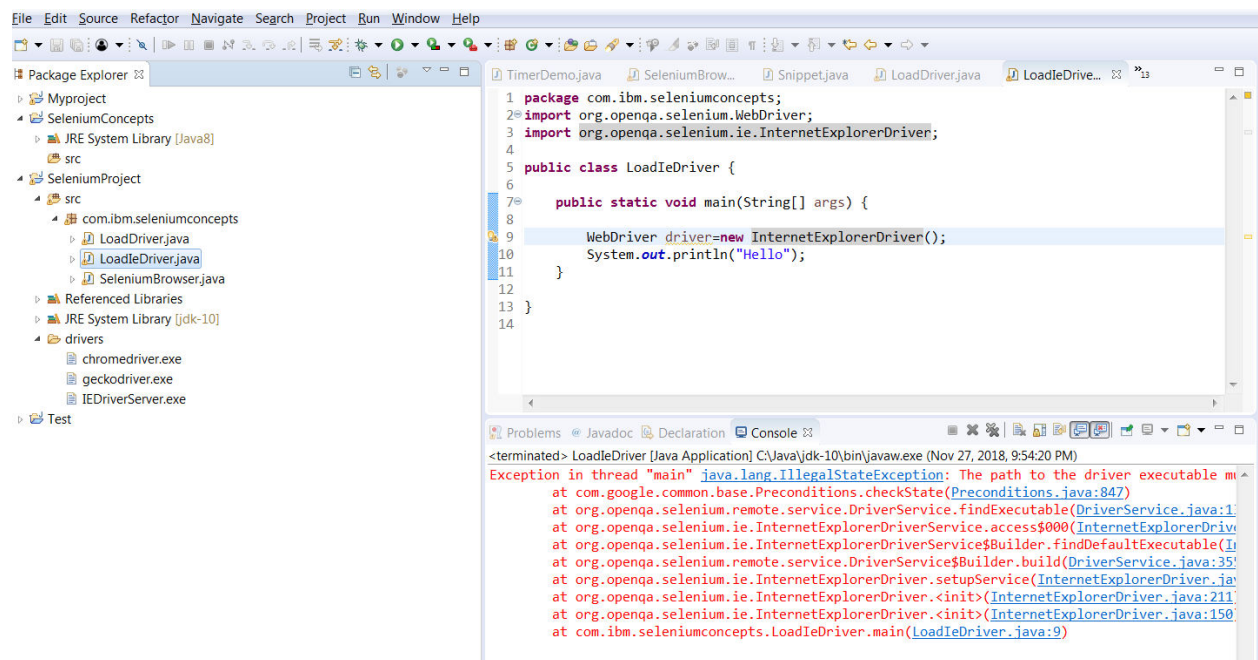

After setting the path for Chrome Driver:

Chrome Browser launched as below:

```

After setting the path for Internet Explorer Driver:

IE browser launched as below:

4.Flow Information

Initially the WebDriver object is created for chrome and Internet explorer with out setting the path for the chrome driver and IE driver. After running, an exception has occurred indicating that the path to driver executable must be set. Then the exe files are downloaded and placed in the drivers folder of Java project. Using the System.SetProperty , the absolute path is set for both of these driver exe files. Then after running the program the exception is not displayed and the browsers Chrome and Internet explorers are launched as per execution.
